

AspenTech Launches aspenONE V7

From the days of the ASPEN project at MIT and the breakthrough release of Aspen Plus, AspenTech has embodied technology leadership. Over the last 25+ years there have been:

innovations in engineering...the first PC-based commercial simulation model
innovations in plant operations...the first use of models online
innovations in supply chain...the first integrated petroleum supply chain

The list goes on.

Over 25 years, the brightest minds in process engineering and manufacturing. Over 25 years, an accumulation of the process industry's premier domain expertise in process optimization. Over 25 years, working in close collaboration with the world's biggest process manufacturers - over 1,500 customers in fact and more than 75,000 individual users.

And now, the culmination of that industry leadership and experience is manifested in the groundbreaking release of aspenONE V7. The first release of V7 represents best practices for process engineering. It redefines ease-of-use for engineering software. It makes operational excellence achievable and—even in the face of today's market challenges—easier than you think.

On September 8, 2008, AspenTech changes the game in software for the process industries with the launch of aspenONE V7. For more information, refer to our updated online media kit, or contact AspenTech Corporate Communications:
